Toxic Substances

We counsel companies involved in manufacturing, processing, importing, and exporting chemicals regulated under TSCA. Our practice ranges from the preparation and filing (or exemption) of PMNs to defending enforcement actions. Often, our TSCA practice is interwoven with our work on patent issues and commercial transactions for chemical manufacturers and laboratories.

Our work in this area has included the following matter:

- Representing an international chemical manufacturer on compliance with TSCA and European Union requirements for the manufacture and sale of new chemical products
