Construction

We represent clients across the spectrum of the construction industry, including property owners, developers, architects, engineers, public and private contracting authorities, financial institutions, contractors, and material suppliers. Our construction litigation attorneys have specialized expertise and include a former contractor and a professional engineer. They work closely with our clients and with experts to quickly identify issues and strategies and to effectively manage the construction dispute resolution process.

In appropriate cases, our attorneys also draw upon the breadth of knowledge, training, and experience within the firm in order to acquire a complete understanding of all phases and aspects of the construction process, including planning, land acquisition and zoning, design and engineering, financing and insurance, bidding and negotiation, project delivery methods, scheduling, and coordination. This approach allows us to rapidly and efficiently identify weaknesses in our opponents' cases, to identify and retain effective experts on specific topics, and to achieve effective claims resolution, whether through litigation, arbitration, or some other alternative dispute resolution (ADR) process.

Our construction attorneys have acted as national coordinating counsel for building product manufacturers, as well as for major retailers during periods of rapid expansion. They also have played crucial roles in high-visibility construction projects across Ohio. Our lawyers bring the same knowledge and professionalism to matters outside the public eye, including disputes involving public works projects, industrial and manufacturing facilities, highways and bridges, commercial facilities, nuclear and fossil fuel facilities, hospital and retirement facilities, libraries, schools, shopping centers, and residential projects.
