

Clean Air Act Permitting and Enforcement

Our attorneys have broad, extensive experience in representing clients in matters involving the Clean Air Act. We assist clients in all manners of air permitting, including major source permitting under the Prevention of Significant Deterioration (PSD) program and nonattainment New Source Review (NSR). In tackling these problems, we emphasize strategic planning with our clients in order to minimize their risk.

We defend manufacturing facilities in state and federal Clean Air Act enforcement actions. Our attorneys also actively participate in rule and permit initiatives. Our firm includes former regulators who bring unique insights and depth of knowledge to the table on behalf of our clients and help to fashion creative and efficient resolution of issues affecting our clients.
